

75 AMAZING HACKING PROJECTS

Beginner Level

Exploring OSINT with Maltego

DNS Enumeration

Simple ARP Spoofing Attack

Creating Fake Login Pages

Understanding Cookies and Sessions

Creating Custom Wordlists

SQLmap Usage for SQL Injection

Basic Firewall Evasion Techniques

HTTP Headers Analysis

Exploring File Inclusion Vulnerabilities

Understanding VPNs and Proxychains

Burp Suite Basics

Command Injection

Password Hash Cracking with Hashcat

Setup CTF Challenge

Advanced Level

Custom Bruteforce Tools with Python

Advanced SQL Injection Automation

Creating Persistent Backdoors

NTLM Hash Extraction

Social Media Phishing Campaigns

Advanced Network Tunneling

Developing WAF Bypass Techniques

Password Spraying Attack

Reverse Engineering for Malware Analysis

Automating Reconnaissance with Python

Custom Protocol Exploitation

Bypassing Two-Factor Authentication

Code Injection Exploits for Shellcode Execution

Zero-Day Vulnerability Research

End-to-End Pentest Simulation

Intermediate Level

Conducting Phishing Campaigns

Reverse Engineering Basics

Cross-Site Scripting (XSS) Automation

Setting Up a Virtual Lab for Pentesting

Email Spoofing

Exploiting Web Sockets

Command and Control Using Netcat

Router Exploitation

Enumeration with Enum4Linux

Creating Custom Exploits for Web Applications

Using Wi-Fi Pineapple for MITM Attacks

Exploring Buffer Overflow on Linux

Network Recon with Airodump-ng

Privilege Escalation on Windows

Automated SQL Injection with jSQL
